

How to get Sci-Hub tokens

using mobile
Phantom wallet

This instruction explains how to get Sci-Hub tokens using mobile Phantom wallet as an example. Tokens are used to support Sci-Hub and open science, as well as to request new papers on a Sci-Net platform.

Let's start by installing the Phantom wallet application to your mobile device:

phantom.com/download

After completing initial setup, you will need to add some Solana to your wallet.

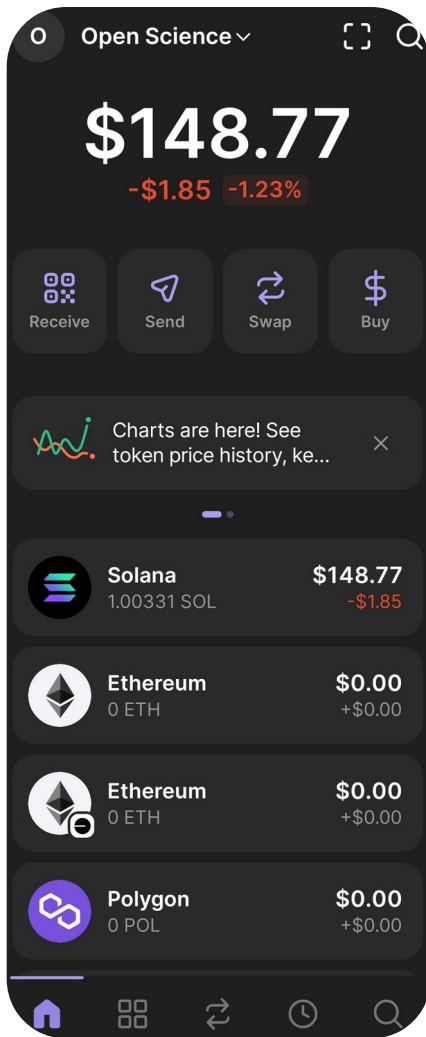

You will need to top up Solana to your wallet. A **8 USD** equivalent of SOL will be enough.

1

what if Solana top up did not work?

In most cases, you will be able to buy Solana tokens directly from inside the wallet using credit card or some local e-money provider, depending on the country. This is the most straightforward way, but it can have some disadvantages: not working in all countries; if it works, you might be asked to do identity verification by providing the scan of your passport / government ID.

In the latter case, your data will not be collected by Sci-Hub, and will be available only to the exchanger service that sells Solana. This service will not know that you're buying Solana for Sci-Hub. In other words, providing documents is secure, but if you're still uncomfortable with it, you can go a more complicated way as well (see Appendix)

If you did everything correctly, you will now see Solana in your wallet. In this example, I bought 1 Solana, equivalent of 148 USD

Now you will need to swap your Solana tokens to Sci-Hub tokens...

2

Open the web browser and navigate to:

sci-net.xyz/exchange

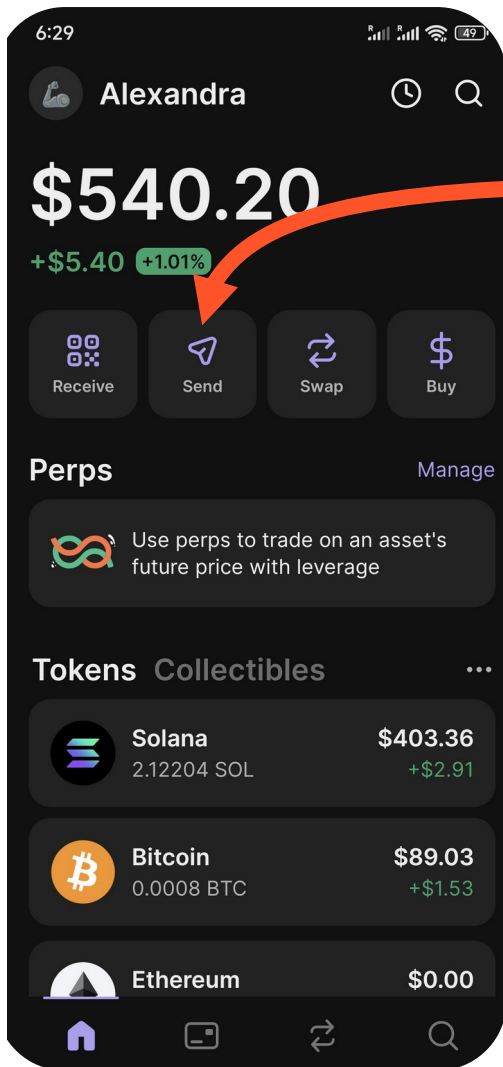

SOL → SCI

automatic exchange of Solana to Sci-Hub tokens

How it works: simply send Solana to the following address, and get equivalent number of Sci-Hub tokens back. The minimum amount to send is ? SOL, which is roughly equal to 9 tokens

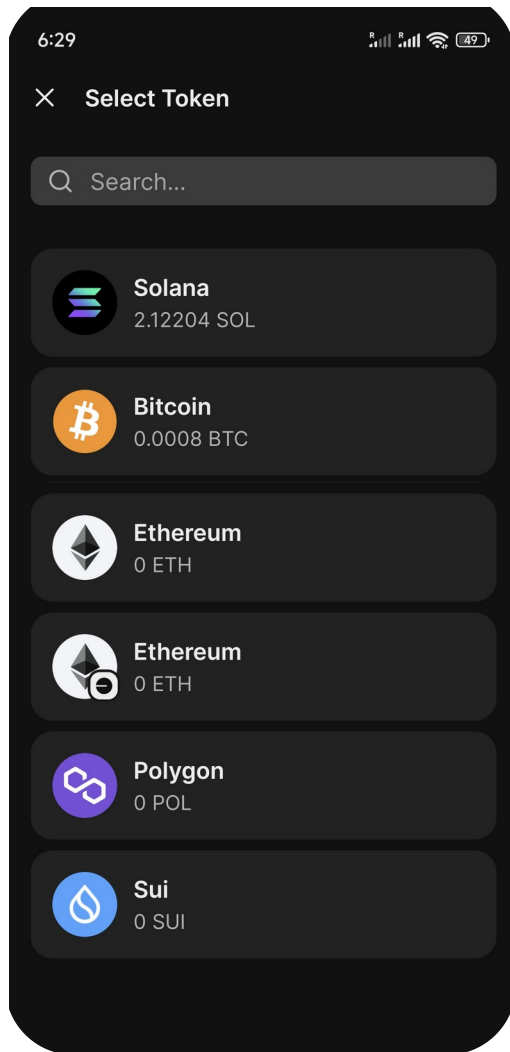

QR code at
the
exchanger
website

DsP7TUeRVkw5Dpwq1ACbu5
DNJojmXRNYypMUgitZzQUh

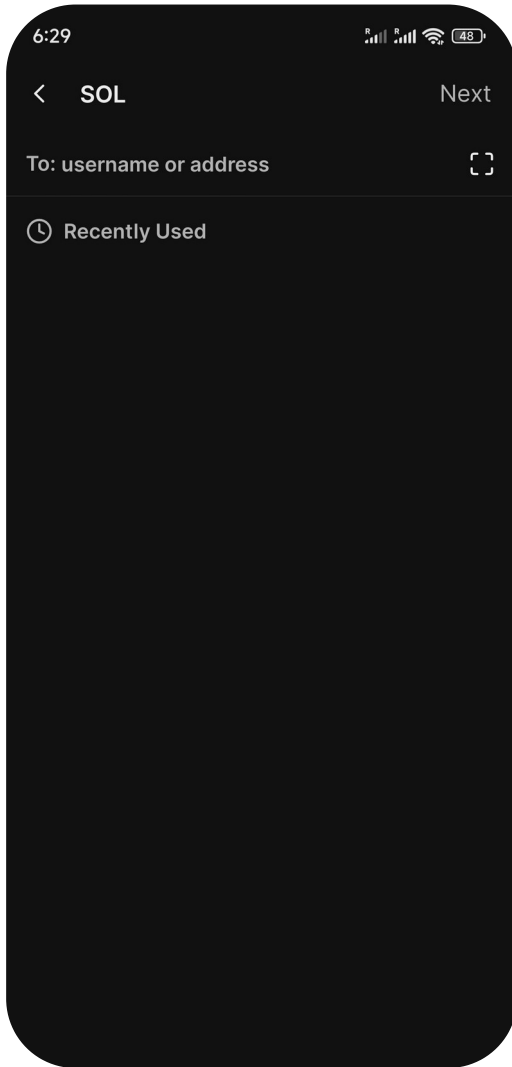

In the Phantom app, press Send button

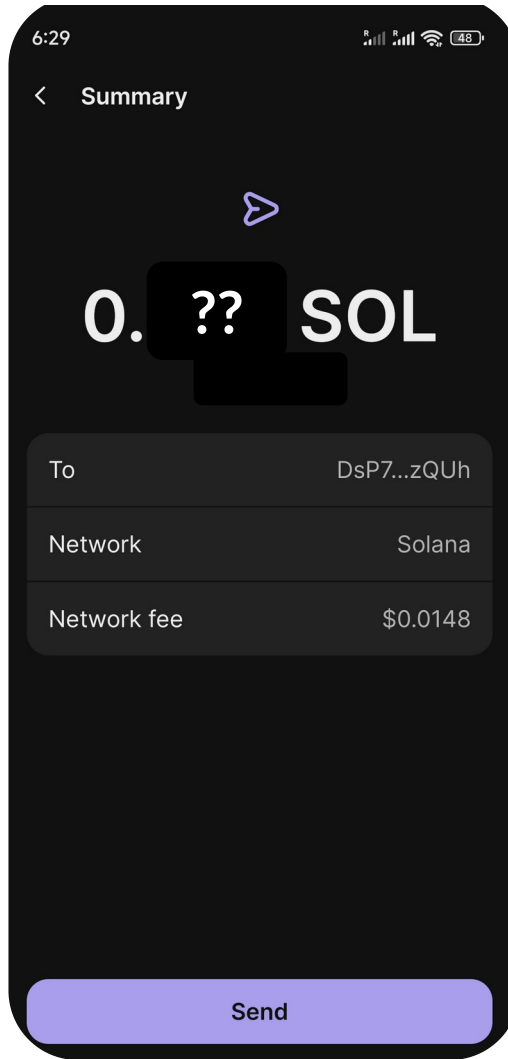

Select Solana
in the list

Press this small square button. A QR code scanner will appear. Scan the QR code on the **exchanger website** that you opened in **Step 2**

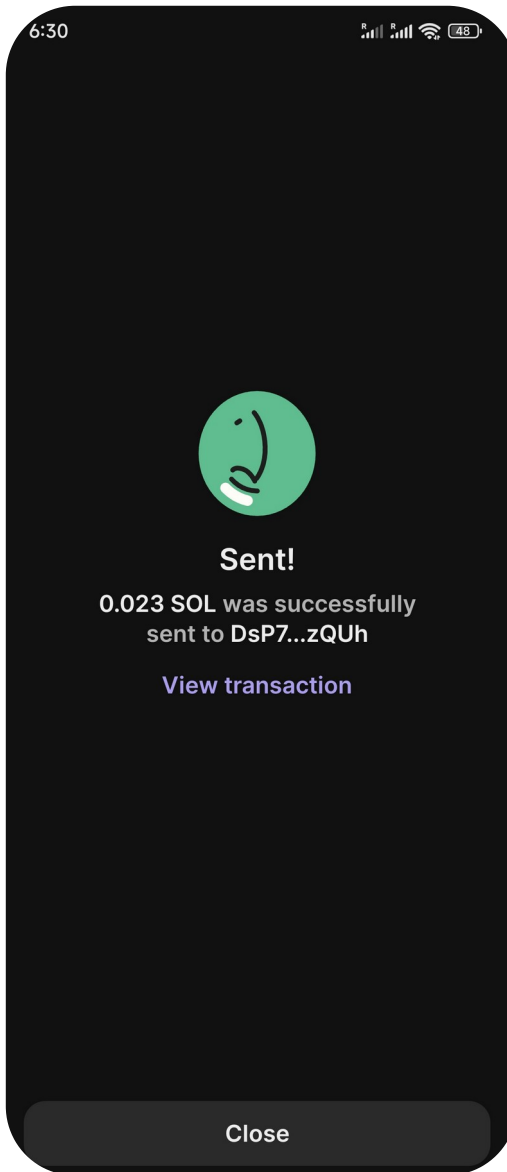

After the QR code is scanned, a screen to send tokens will appear.

Press this button and send the tokens to the exchanger

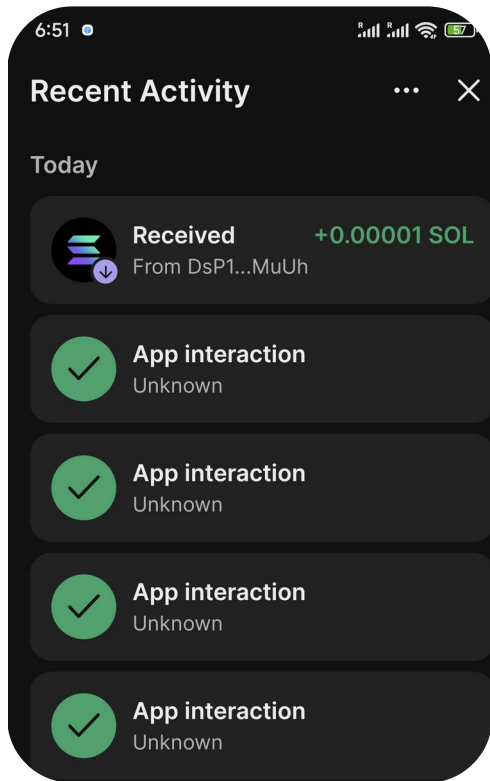

If you did everything correctly, you will see the Success screen.

Now close this screen.

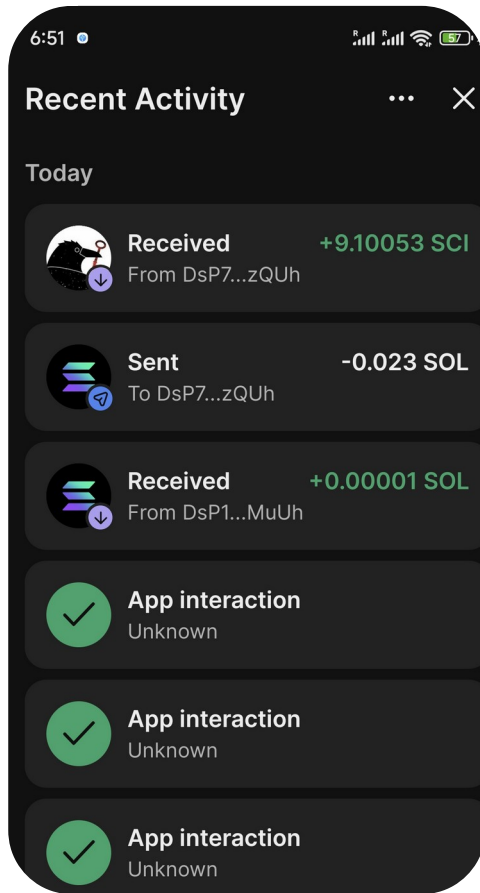

refresh

A recent activity screen will appear. Now you can wait for a couple of minutes, then **refresh** the page (by sliding the screen down)

Note: this step is not **required** – just to confirm...

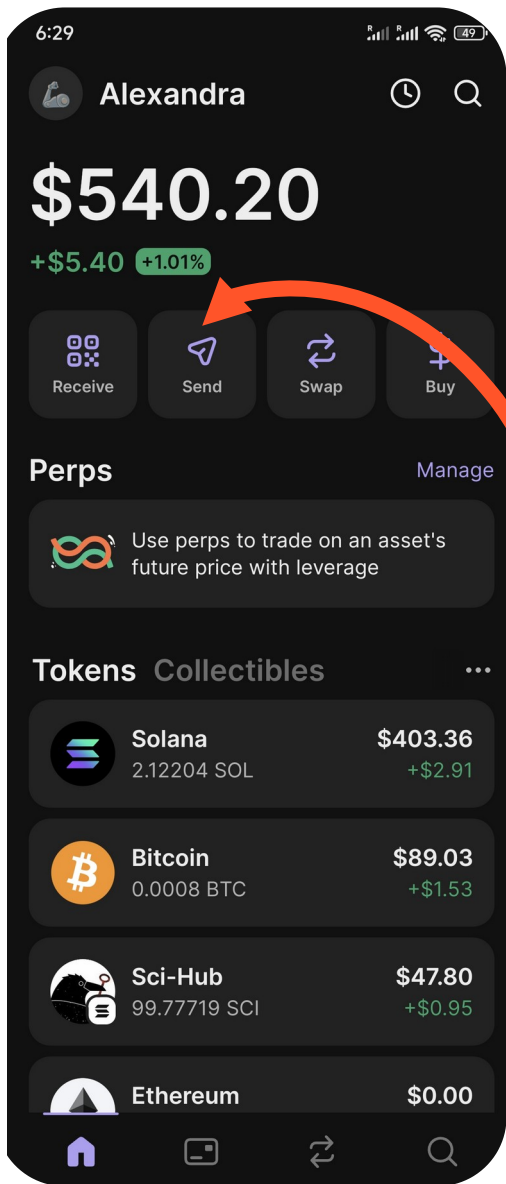

8

If you did everything right, you will see Sci-Hub tokens were sent to your wallet.

Congratulations!

9

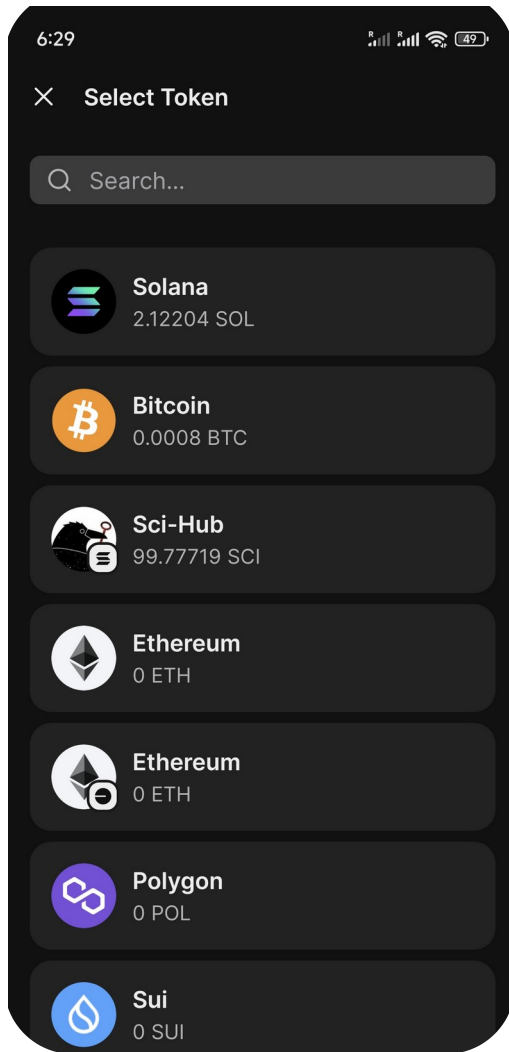

1

Open the web browser and navigate to **sci-net.xyz/invite** Click the QR button and wait for the code to appear

2

In the Phantom app, press Send button

Getting
Sci-Net
invite code

Select Sci-Hub
token.

3

Scan the QR code
on the website.
After a couple
minutes, an
invite code will
appear.

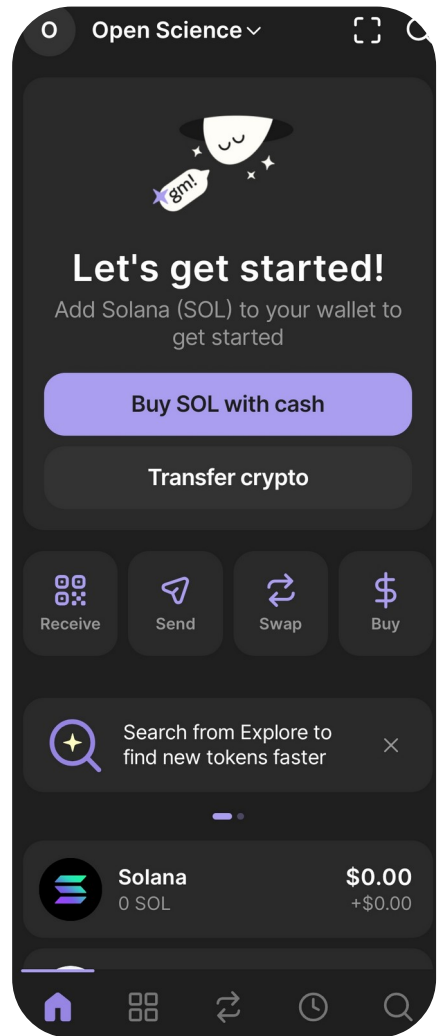

4

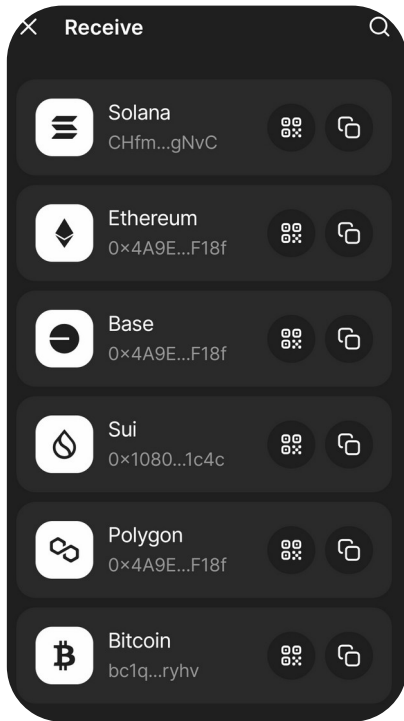

Done!

appendix

top up Solana from external platform

To top up
wallet from
another
platform, you
will need to
get the wallet
address. Click
Receive button
to view wallet
addresses

Click **Copy** icon to copy the Solana wallet address. In this example, the address is starting from **CHfm...**

2

3

Top up the copied address using an alternative platform or exchange available in your country.

If access to the platform is blocked, try opening the website with a VPN browser extension.

Then proceed to the Step 2 of the instruction.
